

PROGRAM 3: SUPPLIER DATABASE

Consider the following schema:

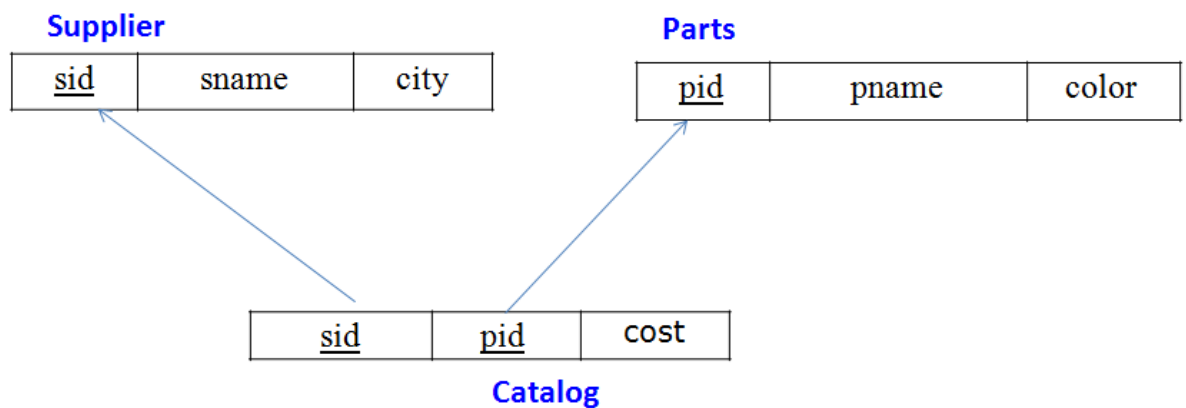

SUPPLIERS(sid: integer, sname: string, address: string)

PARTS(pid: integer, pname: string, color: string)

CATALOG(sid: integer, pid: integer, cost: real)

The Catalog relation lists the prices charged for parts by Suppliers.

Write the following queries in SQL:

Schema Diagram**Table Data**

SUPPLIERS		
SID	SNAME	CITY
10001	Acme Widget	Bangalore
10002	Johns	Kolkata
10003	Vimal	Mumbai
10004	Reliance	Delhi

PARTS		
PID	PNAME	COLOR
20001	Book	Red
20002	Pen	Red
20003	Pencil	Green
20004	Mobile	Green
20005	Charger	Black

CATALOG		
SID	PID	COST
10001	20001	10
10001	20002	10
10001	20003	30
10001	20004	10
10001	20005	10
10002	20001	10
10002	20002	20
10003	20003	30
10004	20003	40

TABLES:

1.supplier

The screenshot shows the MySQL Workbench interface. The left sidebar contains the 'MANAGEMENT' and 'PERFORMANCE' tabs. The 'Query' tab is active, displaying a SQL query that inserts data into the 'supplier' table and then selects all rows. The 'Result Grid' shows the data inserted into the 'supplier' table, which has columns 'pid', 'pname', and 'city'.

pid	pname	city
10001	Acme Widget	Bangalore
10002	Johns	Kolkata
10003	Vimal	Mumbai
10004	Reliance	Delhi

The 'Output' pane shows the execution log, including the time taken for each query and the number of rows affected.

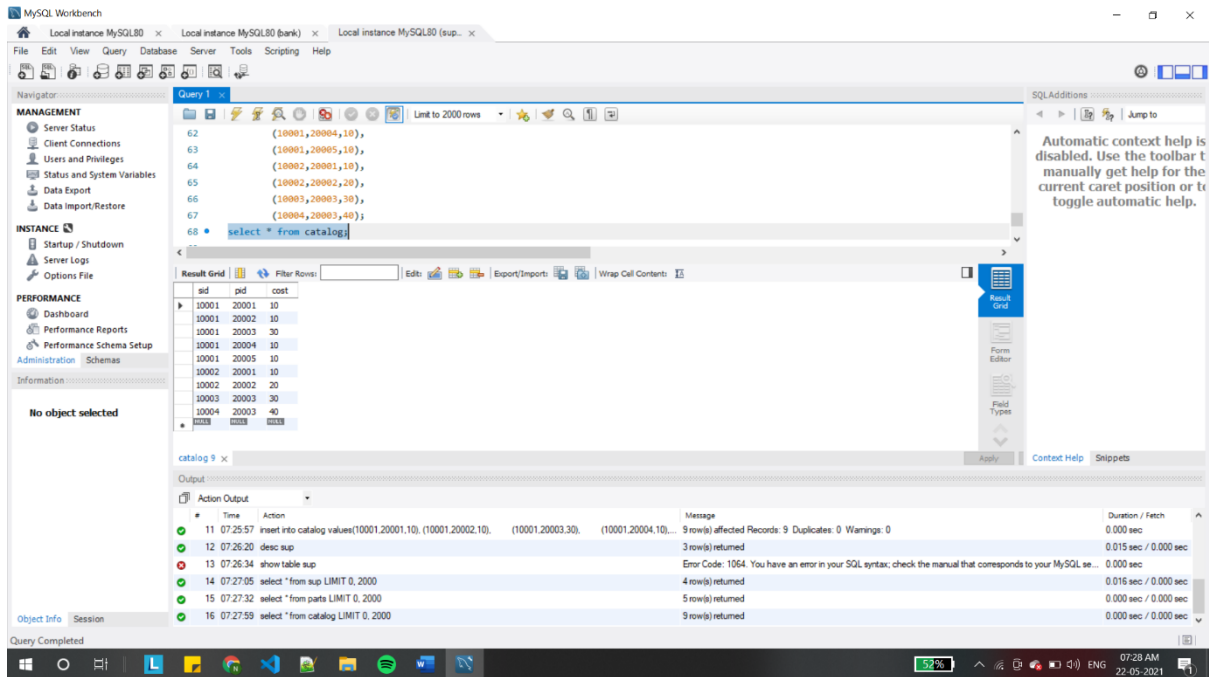

2.parts

The screenshot shows the MySQL Workbench interface. The left sidebar contains the 'MANAGEMENT' and 'PERFORMANCE' tabs. The 'Query' tab is active, displaying a SQL query that inserts data into the 'parts' table and then selects all rows. The 'Result Grid' shows the data inserted into the 'parts' table, which has columns 'pid', 'pname', and 'color'.

pid	pname	color
20001	Book	Red
20002	Pen	Red
20003	Pencil	Green
20004	Mobile	Green
20005	Charger	Black

The 'Output' pane shows the execution log, including the time taken for each query and the number of rows affected.

3.catalog

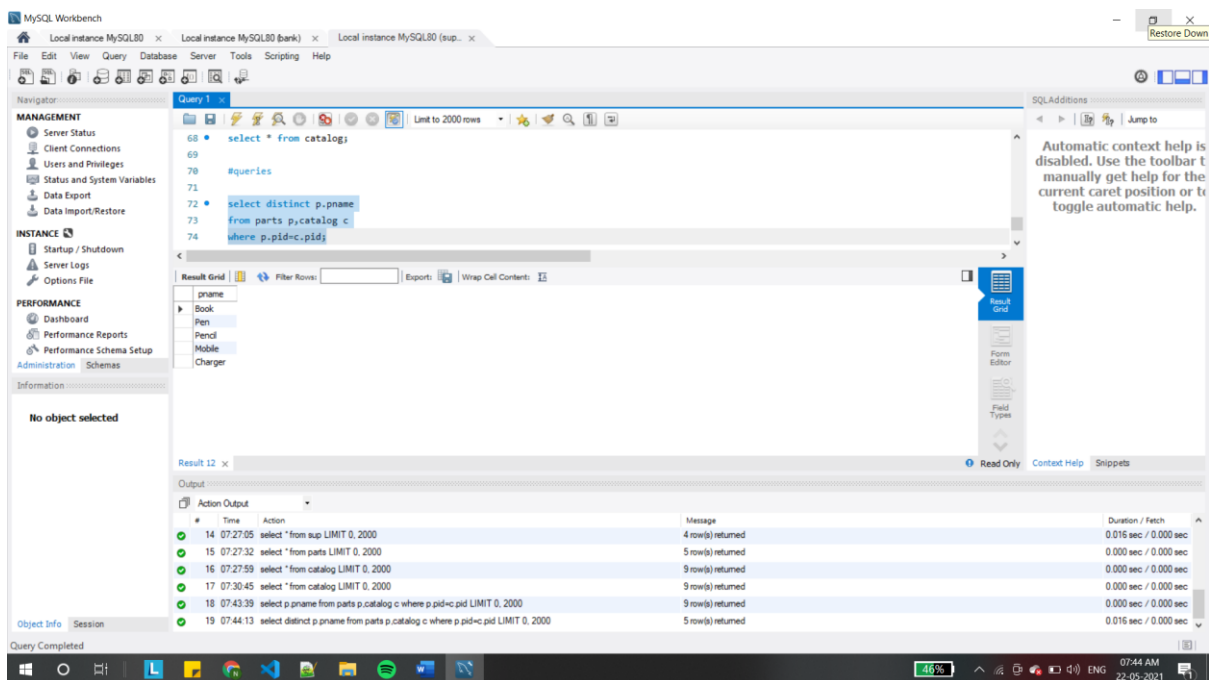

QUERIES:

1.Find the pnames of parts for which there is some supplier.

select distinct p.pname

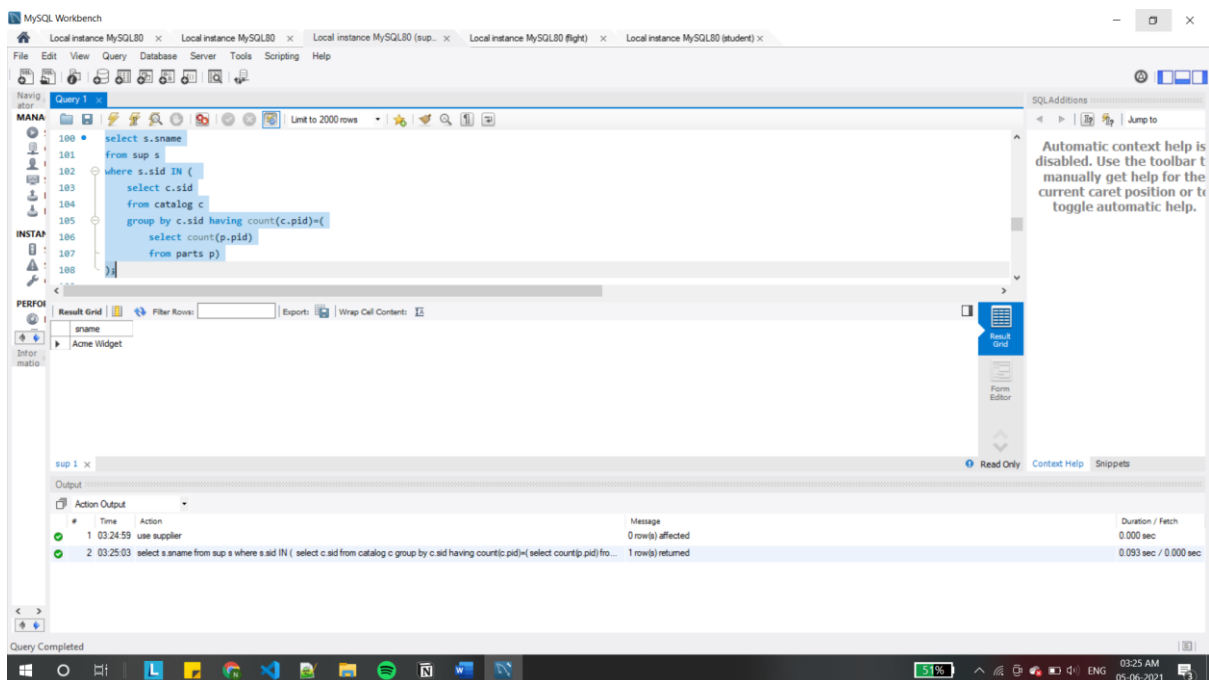

from parts p,catalog c

where p.pid=c.pid;

2. Find the snames of suppliers who supply every part.

```
select s.sname
from sup s
where s.sid IN (
    select c.sid
    from catalog c
    group by c.sid having count(c.pid)=(
        select count(p.pid)
        from parts p)
);
```

3. Find the snames of suppliers who supply every red part.

```
select sid,sname
from sup
where sid IN (
    select distinct c.sid
```

```

from catalog c

where c.pid IN (

    select p.pid

    from catalog c,parts p

    where p.color='Red'

)

);

```

4.Find the pnames of parts supplied by Acme Widget Suppliers and by no one else.

```

select p.pname

from parts p

where pid IN(

    select distinct c.pid

    from catalog c

    where sid=(

        select s.sid

```

```

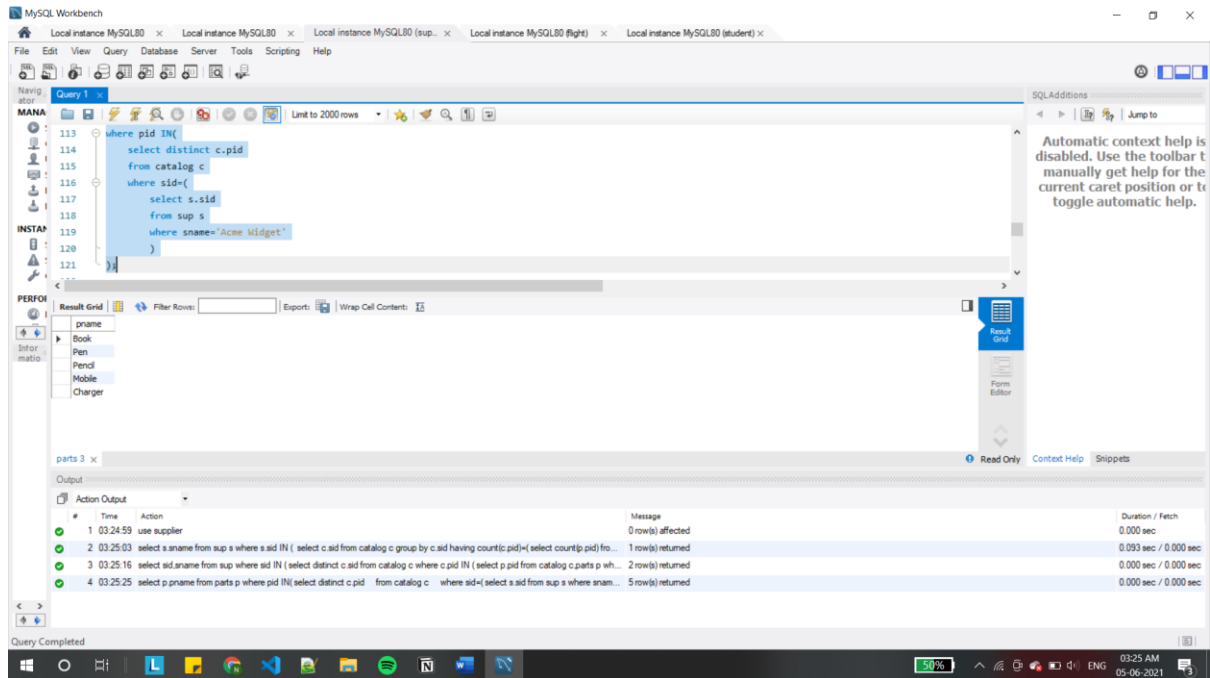

from sup s

where sname='Acme Widget'

)

);

```

5.Find the sids of suppliers who charge more for some part than the average cost of that part (averaged over all the suppliers who supply that part).

```

select c.sid

from catalog c

where c.cost>(

    select avg(cost)

    from catalog

    where pid=c.pid

);

```

6. For each part, find the sname of the supplier who charges the most for that part.
 select p.pid, s.sname

from parts p, sup s, catalog c

where c.pid=p.pid and c.sid=s.sid and c.cost=(

select max(c1.cost)

from catalog c1

where c1.pid=p.pid

);
